PROFILE

Backend software engineer building production business software with C#/.NET and PostgreSQL. Core engineer on İLSAN Tekstil's in-house, multi-tenant ERP platform, running in production, where I own database and API design and delivered the first business unit (Open-End) plus finance and costing features end-to-end. Experienced in RBAC/JWT security, SQL performance tuning, automated testing, Docker-based deployments and internal developer tooling, with AI-assisted development (Claude Code, Codex) as part of my daily workflow.

EXPERIENCE

İLSAN Tekstil San. ve Tic. A.Ş. | Software Engineer

May 2026 – Present · Malatya, Türkiye

- Core engineer and top contributor (900+ commits) in a 4-person team building a modular, multi-tenant ERP framework (.NET 9, ASP.NET Core, EF Core, PostgreSQL, Redis, React/TypeScript) running in production.
- Delivered the Open-End business unit, the first of the factory's 5 units to go live, end-to-end: orders, work orders, production tracking, warehouse, shipment planning and costing, from business rules and REST APIs to React/TypeScript UIs.
- Built finance and costing features: customer accounts, payment terms, balance calculations and cost summaries.
- Designed PostgreSQL schemas and relations; improved slow queries and reports through indexing, views, functions and stored procedures; maintain triggers and data-integrity rules.
- Implemented role-based access control with JWT access/refresh tokens, session management and login-attempt throttling; covered authentication and authorization flows with xUnit unit tests.
- Built PDF document generation (order confirmations, packing lists) and barcode/label printing integrated into production and shipment workflows.
- Improved developer tooling: built, as sole author, a Tauri desktop app that automates Git branching, dev/production releases and database transfers for the team; contributed to the model-driven generator that produces screens and APIs from JSON models.
- Manage the company server and Git infrastructure (Docker, Nginx, Cloudflare Tunnel): deployments, backups, server hardening, and production schema-sync and data-migration scripts.
- Set up AI-assisted development workflows with Claude Code and Codex: project-specific CLAUDE.md/AGENTS.md guidelines, custom skills and agent definitions.

Bera Ar-Ge Yazılım | Software Development Intern

June 2024 – August 2024 · Malatya, Türkiye

- Developed an e-commerce web application with a role-based admin panel for product and user management.
- Implemented token-based API authentication and role-based authorization.

TECHNICAL SKILLS

Backend: C#, .NET 8/9, ASP.NET Core Web API, REST, EF Core, ADO.NET, SignalR, async/await, .NET Framework

Databases: PostgreSQL, SQL Server, T-SQL, schema design, indexing and query optimization, views, functions, stored procedures, triggers, Redis

Design & Security: OOP, SOLID, layered and modular architecture, Dependency Injection, FluentValidation, JWT, RBAC, rate limiting

Testing: xUnit, Vitest, unit testing of authentication/authorization and business logic

DevOps: Git/GitHub, GitHub Actions, Docker, Docker Compose, Linux (Ubuntu Server), Nginx, Cloudflare Tunnel, Serilog

Frontend & Desktop: React, TypeScript, JavaScript, Tauri

AI-Assisted Development: Claude Code, OpenAI Codex, CLAUDE.md/AGENTS.md, custom skills and agents

SELECTED PROJECTS

SharpHunter | Personal Portfolio & Blog Platform

ASP.NET Core Web API (.NET 8) · EF Core · SQL Server · React

- Built a REST API and admin panel for projects, blog posts, categories, tags and user management.
- Separated WebAPI, Business, DataAccess, Entities and Core layers; used Autofac for DI, FluentValidation and AOP for validation and authorization.
- Added JWT with claim-based roles, IP/user-based rate limiting, centralized error handling and structured logging with Serilog.
- Deployed with Docker Compose and Nginx on Ubuntu Server; set up automated deployment with GitHub Actions over Tailscale.

E-Commerce Web Application

ASP.NET Core Web API · SQL Server/T-SQL · ADO.NET · React

- Built a three-layer REST API for product and user management with SQL Server/T-SQL and ADO.NET, integrated with a React front end.
- Implemented token-based authentication, admin/product-manager roles and product image management with Cloudinary.

EDUCATION

Malatya Turgut Özal University

B.Sc. Computer Engineering · Graduated June 2025

Additional training (Programming Advices): data structures & algorithms, C#, SQL/T-SQL, REST APIs, JWT/roles/policies, SOLID.

LANGUAGES

Arabic: Native · Turkish: Near-native · English: Intermediate (B1)
